

Firefox and Netscape browser Plug-in For Internet Explorer

1.) Where do I get the plug-in to run Internet Explorer websites from within Firefox or Netscape?

<https://addons.mozilla.org/en-US/firefox/addon/1419>

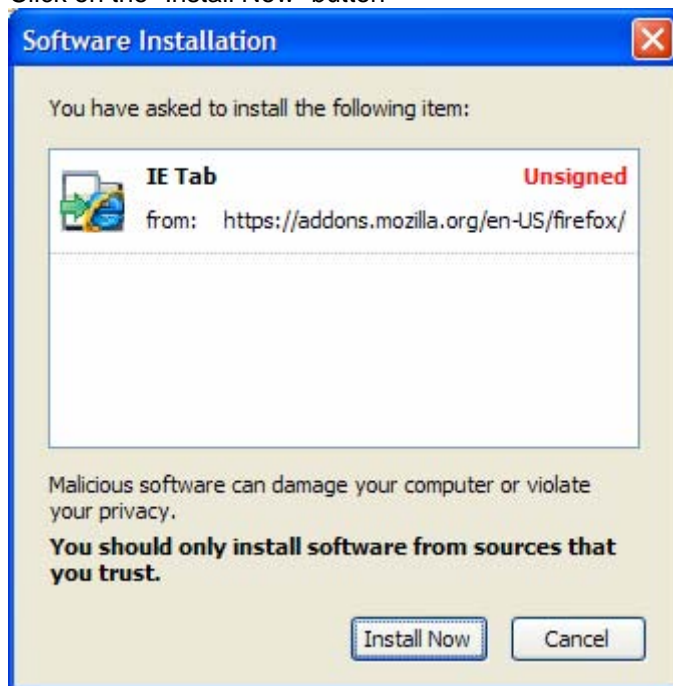

2.) So how does the new plug-in install?

Click on the button "Install Now"

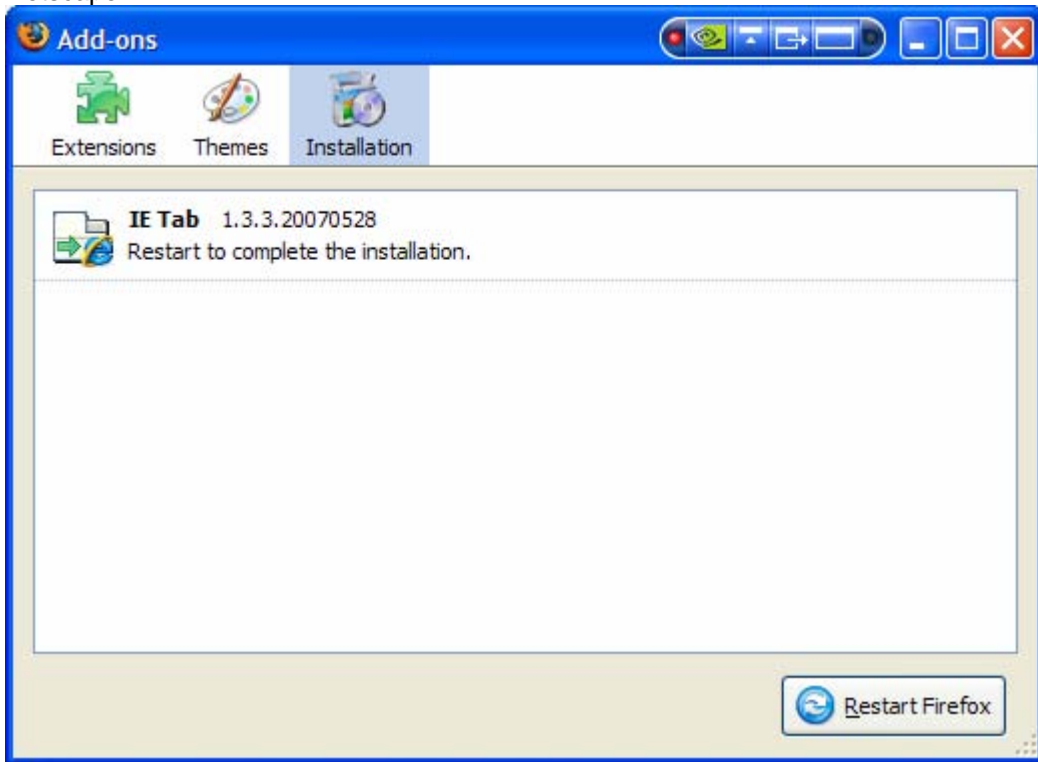

3.) Software Installation Process

Click on the "Install Now" button

After the install process is complete click on the “Restart Firefox” for Netscape user “Restart Netscape”

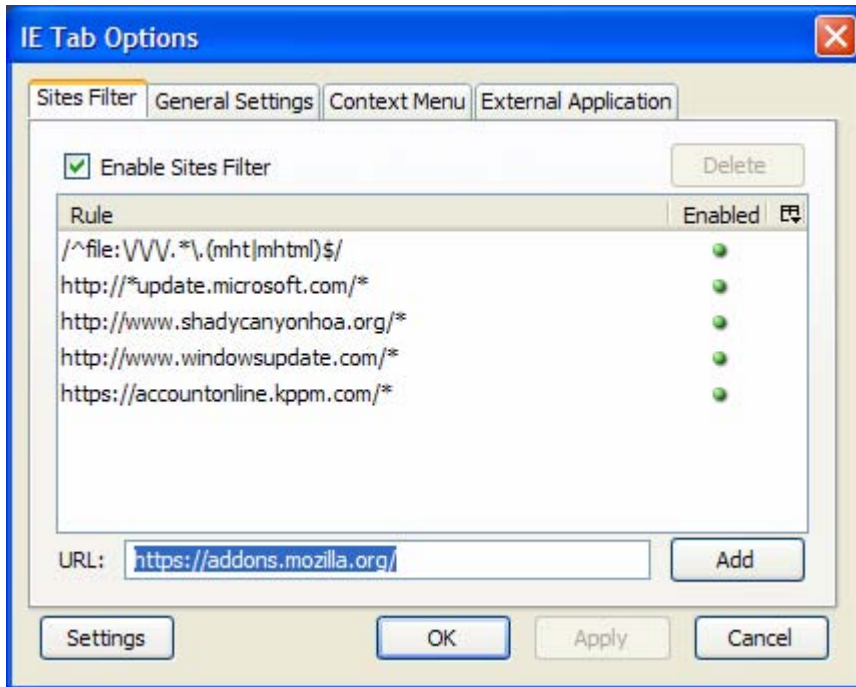

4.) How to add my Property Management Company to filter from within Firefox or Netscape that runs in Microsoft only?

Go to **Tools/IE Tab Options**

Next add the website you would want to be always filter out from Firefox. In this case it would be your Homeowners Association online website URL.

From this point forward everytime a website is typed in the URL it will check to see if it is not in the list before filtering. You can also remove the site it you accidentally added it in.

Another option is when you are on a website that you typed the URL site you can also right-mouse click on the page to bring up the menu and select **“View Page in IE Tab”** This will not add the URL to the list, this is only for viewing.
